

EDUCATION

The University of Georgia <i>Master of Science in Computer Science</i>	Athens, GA <i>May 2026</i>
Sathyabama Institute of Science and Technology <i>Bachelor of Engineering in Computer Science</i>	Chennai, India <i>May 2024</i>

EXPERIENCE

Rural Studies Institute, GCSU (Sponsored by Georgia Tech PIN Program) <i>Full-Stack Developer & Data Pipeline Intern</i>	Milledgeville, GA <i>May 2025 – Aug 2025</i>
- Developed custom Python scrapers as part of a 3-person team, aggregating socio-economic datasets from US Census (ACS) and USDA APIs, automating ingestion of 10k+ data points and cutting manual data entry by 40%. - Built automated data pipelines converting raw spreadsheets to GeoJSON, reducing integration time by 30%. - Designed and deployed interactive map-based web platform using JavaScript, Leaflet.js, and WordPress; launched to 500+ monthly users across research and policy teams. Presented at the <i>Emerging Innovators Celebration</i>. Project Link: gcsu.edu/ruralstudies/understanding-black-belt-region	

TECHNICAL SKILLS

- **Programming Languages:** JavaScript/TypeScript, C, C#, Python, HTML/CSS, Go
- **Cloud & Infrastructure:** AWS (EC2, S3, RDS, CloudFormation, ECS, Fargate, CDK), Git, Docker, Bash, CI/CD (GitHub Actions)
- **Backend & APIs:** Node.js, Express.js, REST APIs, WebSockets/Socket.io, JWT, Hono, JSON
- **Databases & Data:** PostgreSQL, Prisma ORM, MongoDB, schema design, indexing
- **Testing & Quality:** Jest, Vitest, Unit & Integration Testing
- **Frontend:** React.js, Next.js, Tailwind CSS, Recoil, Zustand, Vite, HTML/CSS
- **Tools, Practices & AI:** Zod, Bcrypt, Claude Code, Agile/Scrum, Code Reviews

PROJECTS

TweenGen	GitHub Demo
- Architected a lightweight animation engine with optimized easing algorithms, reducing the final bundle size by 15% compared to standard external animation libraries. - Reduced canvas re-render cycles by 40% through memoization and selective state updates in Recoil, maintaining a consistent 60 FPS during complex multi-object animations. - Built drag-and-drop timeline UI with GSAP-powered live preview and code export system generating production-ready HTML/CSS/JavaScript; used Claude Code as a pair-programming reviewer to maintain a project logic graph and stress-test edge cases. Hosted on Vercel.	
DGE - Dependency Graph Explorer	GitHub In Development
- Architecting a TypeScript monorepo (npm workspaces) with a runtime-agnostic core analysis engine shared by an npx CLI and VS Code extension — single codebase, two delivery targets. - Core engine parses package-lock.json into a directed dependency graph, detecting duplicate packages (multiple resolved versions of the same library) and computing on-disk size per package. - Visualization layer renders the full dependency tree as a zoomable force-directed graph in React + Vite; CVE flagging via OSV.dev batch API to badge known-vulnerable packages.	

CERTIFICATIONS

- AWS Certified Developer – Associate ([Credly](#))
- AWS Certified Cloud Practitioner ([Credly](#))
